Study of the Pharmacokinetics and Safety of Trastuzumab Emtansine in Chinese Participants With Locally Advanced Inoperable or Metastatic HER2+ Breast Cancer

Trial Status
Completed

Trial Runs In
1 Countries

Trial Identifier
NCT03153163 BP29920

The source of the below information is the publicly available website [ClinicalTrials.gov](https://clinicaltrials.gov). It has been summarised and edited into simpler language.

Trial Summary:

This is an open-label Phase I study of single-agent trastuzumab emtansine administered by intravenous (IV) infusion. The study will characterize the pharmacokinetics of trastuzumab emtansine and its relevant analytes and the safety of trastuzumab emtansine in Chinese participants with human epidermal growth factor receptor 2 (HER2)-positive locally advanced/metastatic breast cancer (LA/MBC).
