Neovascular Age-related Macular Degeneration Diabetic Macular Edema

A Study in Patients With Neovascular Age-Related Macular Degeneration or Diabetic Macular Edema to Evaluate the Safety of the Faricimab Prefilled Syringe

Trial Status
Completed

Trial Runs In
1 Countries

Trial Identifier
NCT05569148 GR43742

The source of the below information is the publicly available website ClinicalTrials.gov. It has been summarised and edited into simpler language.

Trial Summary:

This Phase IIIb, single-arm, open-label multicenter clinical in-use study in patients with neovascular age-related macular degeneration (nAMD) or diabetic macular edema (DME) is designed to assess the ability of the intended users, healthcare providers (HCPs), to follow the Instructions for Use to perform an intravitreal (IVT) injection using the 6-milligram (mg) faricimab prefilled syringe (PFS) configuration per the intended use. Any adverse events occurring during the 7-day study reporting period will be summarized.
