

Myocardial Infarction Acute Coronary Syndrome

A Study of Elecsys® Troponin T Hs Gen 6 in Participants with Symptoms of Acute Coronary Syndrome

Trial Status
Active, not recruiting

Trial Runs In
11 Countries

Trial Identifier
NCT06734117 CIM RD005477

The source of the below information is the publicly available website [ClinicalTrials.gov](https://clinicaltrials.gov). It has been summarised and edited into simpler language.

Trial Summary:

This prospective, non-interventional, single arm, longitudinal cohort multicenter study will recruit approximately 5600 consecutive all-comers, consisting of patients with signs and symptoms of acute coronary syndromes (ACS) who present in the emergency department (ED). The main objective of the study is to determine the clinical performance of Elecsys Troponin T hs Gen 6 versus the centrally adjudicated clinical diagnosis at various time points after ED presentation using the previously determined clinical cut-off of a universal 99th percentile upper reference limit.
