

Healthy Volunteers

A Study to Evaluate Safety, Tolerability, and Pharmacokinetics of Enicepatide in Generally Healthy Adult Chinese Participants

Trial Status
Not yet recruiting

Trial Runs In

Trial Identifier
NCT07626515 YP46402

The information is taken directly from public registry websites such as ClinicalTrials.gov, EuClinicalTrials.eu, ISRCTN.com, etc., and has not been edited.

Official Title:

A Phase I, Randomized, Double-Blinded, Placebo-Controlled, Study to Investigate the Safety, Tolerability, and Pharmacokinetics of Enicepatide in Adult Chinese Participants With Body Mass Index ≥ 23.0 kg/m²

Trial Summary:

This is a Phase I, randomized, double-blinded, placebo-controlled, study to assess the safety, tolerability, and pharmacokinetics (PK) of enicepatide in generally healthy adult Chinese participants with body mass index (BMI) ≥ 23.0 kilograms per meter squared (kg/m²).
